

NextDent

by 3D SYSTEMS

“We are witnessing the evolution of dental 3D printing solutions thanks to NextDent and 3D Systems. The high accuracy, consistency and productivity achieved when using the NextDent 5100 allows our customers to grow their business by providing greater value to their product.”

Martin Goridkov, Sales Manager CAD/CAM Equipment
at Dentatechnica Ltd, Sofia, Bulgaria

Specialist of the month

In 2018 Martin Goridkov started Dentatechnica with the mission to take the business of digitalization to the next level. For him, as a mechanical engineer with more than 9 years of experience in the heavy industry, it was a challenge to apply all his acquired knowledge to the development and growth of digital processes in dentistry for their market. The CAD/CAM business is a specific and long-term process, which is a combination of knowledge and commitment to continuous training of customers.

Martin had the privilege of being one of the first in his region to work with the printer and materials for testing purposes before the products were officially introduced to the market. The test results were really impressive and convinced

Martin that this complete workflow of 3D printer and resins could change the work processes for dental laboratories.

The Dentatechnica team is proud of the fact that since the introduction of the workflow one of the largest laboratories in Bulgaria started working with the NextDent 5100 and intends to further develop their digitalization process. The increase in the number of intraoral scanners among dentists fully justifies the investment in a high level 3D printer, which in a few minutes supplies the user with a product of perfect quality. The Dentatechnica team strives to provide complete training and education for their customers in order to ensure that they can use the printer and materials in the best way to enjoy their work to the fullest.
